

STEP | 100

The automatic escalator wet-cleaning machine

STEP 100 – Always one step ahead

The **STEP 100** cleans treads and risers reliably, visibly, and thoroughly in one step without leaving any residue.

Salient features:

- Compact and with a built-in water tank
- Can be transported and operate by a single person
- Does not interfere with the escalator controller
- The steps may remain installed during cleaning, due to the inbuilt intergrated suction, and can be immediately accessed after cleaning.
- 3 cleaning cycles, suitable for many different degrees of soiling, are already programmed in, and can be chosen using a selector switch.
- Usage of water and cleaning chemicals can be dosed sparingly, making environmentally friendly and sustainable cleaning possible.
- The strong integrated suction of the **STEP 100** there is no water penetration into the escalator, and the integrated hose holder also prevents remaining water in the hose from leaking onto the escalator.

Single action start-up:

- With a rapid adjustment with a wrench, the **STEP 100** sits safely on the stairs.
- Optimal adjustment to the step height ensures no water gets into the escalator, and is compatible with escalators of different heights and manufacturers. Once adjusted to an escalator type, **STEP 100** cleans it literally step by step.
- The 20litre tank ensure long cleaning cycles.
- Varying lengths and textures of the integrated brushes ensure that all types of soiling are eliminated quickly.
- The control panel of the **STEP 100** is simple and intuitive, the keypad is clear and concise with self explanatory symbols that cross all language barriers.
- The integrated guiding wheels assist the **STEP 100** to “climb up” the escalator as it cleans, and to “climb down” when the cleaning is completed, making it easy and effortless to operate.
- The front placement of the center of gravity ensure that the **STEP 100** rests securely on the escalator, and by adjusting the combination of the step height and the activated brake, the **STEP 100** is secured against falling down from the escalator.

Cleaning programs:

Basic cleaning per cycle:	15 sec
Maintenance cleaning per cycle:	27 sec
Intensive cleaning per cycle:	39 sec

The machine is then easily moved, and the remaining stair width is cleaned.

TRAVEL | 600

The turbo wet-cleaning machine for travelators and escalators

TRAVEL 600 - Travelator / Escalator cleaning machine

Extremely fast, thorough cleaning of automatic travelators

The compact **TRAVEL 600** cleans automatic travelators quickly, thoroughly and close to the edge when the travelator is in operation – naturally without having to operate the travelator control. An optimum cleaning result is achieved thanks to the special counter-rotating brushes combined with the patented extractor unit.

With the **TRAVEL 600**, travelators and also the steps of escalators can be cleaned. The powerful integrated extractor unit prevents detergent dripping into the travelator shaft (electrical and mechanical system) and thus enables safe, gentle cleaning without residue.

The **TRAVEL 600** cleans close to the edge and can therefore also clean the normally difficult to clean edge areas of travelators of all well-known manufacturers.

The advantages at a glance

- Fast cleaning of all conventional travelators
- Close to the edge cleaning when the travelator is in operation
- Excellent cleaning results
- Dissolves the most stubborn dirt
- Powerful extraction
- High efficiency
- Excellent cost-benefit ratio
- Counter-rotating special brushes
- Simple transport
- Compact construction

Operation programme

Operation is simple: There are 3 pre-set programmes with different levels of water consumption. The programme is selected according to the degree of soiling and the operating speed of the escalator/travelator.

A warning tone sounds if:

- The vacuum breaks down
- Foreign objects are sucked in
- The water supply runs out.

In this case the cleaning head lifts up automatically and the machine switches itself off.

Foreign objects can be discarded by simply removing the suction roller.
